CONSTRUCTION ESTIMATING

Two (2) Day Course: **NOVEMBER 26, 27 2007**
8am - 4pm / Red River College - 2055 Notre Dame Avenue

This two-day course offered in a workshop format will cover the basics of construction estimating. Initial topics will include processes and procedures for measuring quantities and standard industry formats for organizing the data. What about pricing the estimate? What is the difference between unit pricing and assembly pricing? What should be included in the project in-directs or general expenses? There will be numerous examples to illustrate or support the topics, but be prepared to participate. Groups will discuss a variety of related problems or case studies.
Instructor: Jason Coreau
